

SCI261 : Cooperative Work Experience in the Natural Sciences

This course provides students the opportunity to participate in a laboratory or field project in the natural sciences, under the supervision of a mentor. The course provides the student with the opportunity to apply the principles learned in the classroom to a practical real-world project. The project may be performed on campus, or at an off-campus location. The project outline needs to be approved by the department. Time commitment is based on the number of credits, approximately 70 hours per credit.

Credits 1-4

Prerequisites

Two 4-credit science with labs courses with a grade of C or higher and approval of the department

Semester Offered

Varies
