

ENV120 : Introduction to Environmental Science (Lecture Only)

A study of environmental interactions and the impact of humans on the environment. The use of natural resources, including land, air, water, mineral and biological resources, is examined. Local and global examples are presented to enable students to better understand and evaluate contemporary environmental problems and the application of science to their solution. Interdisciplinary knowledge is used to understand environmental problems. (3 class hours).

Credits 3

Prerequisites
